

The algae

The seaweeds termófilas of Lahuen Co, is of the Cyanophyceae type, green-bluish color. They naturally inhabit in the thermal springs, in conditions in which another type could not live on life beings, had so much to the high mineralization as to the temperature of the flowing one.

It is possible to be observed at first in natural thermal wells and also in our swimming pools, since through its microscopic characteristic they also happen through the filters, soon to group themselves and to form small islands of seaweed on some surface.

The value of the seaweed termófilas is added to the originating properties of minerals of thermal waters. These contribute benefits to the human being, nutritious as tranquilizing and as much healthy, where the seaweed complements with qualities disinfectants and regenerative for the skin. (*)

(*) Essay made by *Mónica Puts, Lic. Cs. Biological, GRAPE, Masters in Conservation and Management of Natural Means, in complement with studies of the Dr. Accorinti and others.*

Important: it is to emphasize that Lahuen Co, spa thermal of mountain is not a medical center nor of treatments of any type. We did not count specifically on protocols for the suitable attention of diseases.

The benefits of thermal waters are an integral addition that completes a special experience.
